# **WEATHER OF CONCERN**

## **Weather of Concern**

- Hot temperatures combined with locally breezy north winds and low humidity will lead to critical fire weather conditions today into the weekend for interior Northern California.
- Increased risk of heat related illness on Saturday for northwest California.

# **WEATHER SYNOPSIS BY REGION**

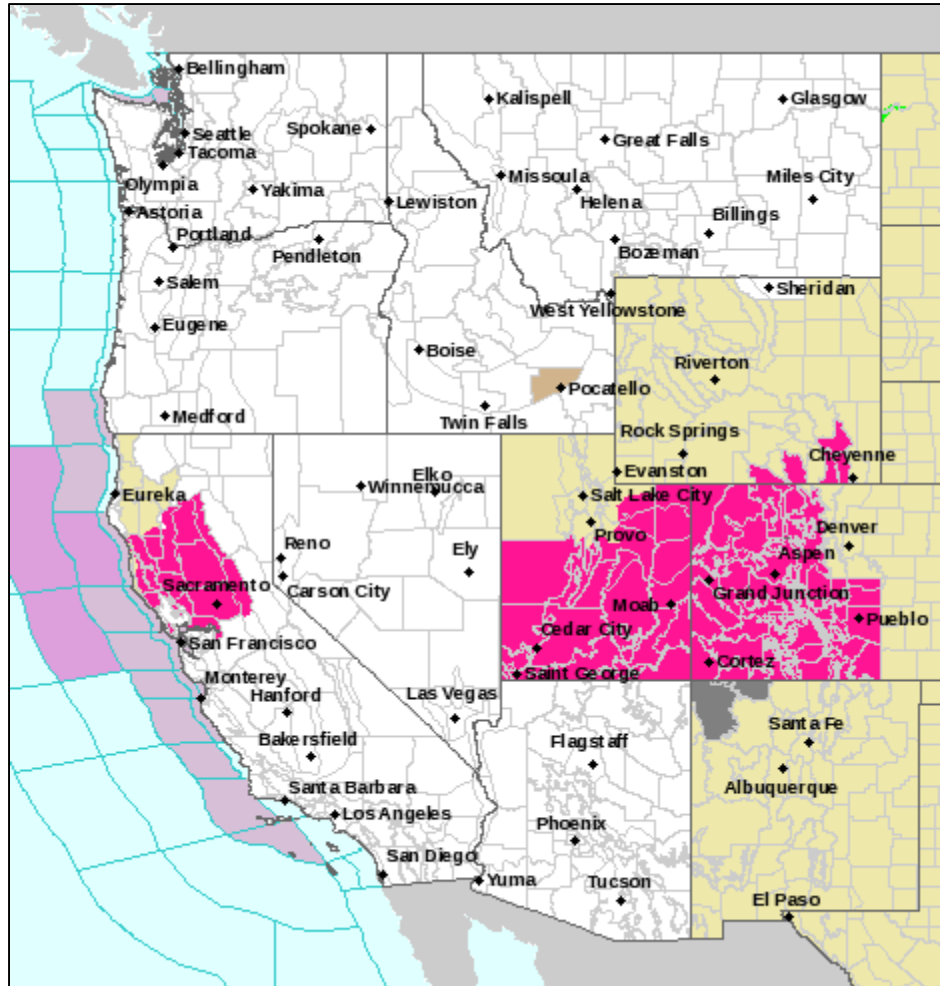

## **NORTHERN CALIFORNIA**

Periods of gusty winds, hot temperatures and low humidity will occur through this weekend across the region as the weather pattern remains a bit unsettled with passing troughs and strengthening high pressure in between. High pressure strengthening out over the Pacific will affect the region through Sunday. Moderately strong, gusty N to NE winds will be developing early today and continue into Sunday. Peak wind gusts will be 20 mph to right around 30 mph. Temperatures will be hot (100 Fri, 105 Sat and Sun) and relative humidity (RH) low (5-12%) in the Sacramento Valley/Foothills and eventually Mid Coast to Mendocino. Those conditions are significant enough to designate High Risk for Sacramento Valley/Foothills Friday and Saturday and the Mid Coast to Mendocino Saturday. This event and its effects will be very similar what occurred this past Friday/Saturday. Winds will become much lighter in the Sacramento Valley Sunday, although hot, dry conditions will continue in all areas. Monday a trough is expected to move south over the region from out of the Pacific NW, and this will moderate temperatures and promote cooler onshore flow through next Thursday. Light northerly overnight winds in the Sacramento Valley and foothills may continue. Areas with gusty afternoon westerly winds are likely to continue over the western areas of the Geographic Area at that time as well.

## **SOUTHERN CALIFORNIA**

A weak Pacific trough over the West Coast will cool temperatures to near or a little below normal through today, with 70s to low 80s across the mountains and mid 80s to mid 90s in the valleys. The marine layer will deepen, with low clouds and fog making it over the lower mountain slopes by this morning. A weak ridge of high pressure will build into California from the Pacific Ocean bringing several degrees of warming to the interior portions of the region this weekend. However, the marine layer will continue to be deep causing temperatures across the coastal areas and the coastal valleys to remain near to a little below normal. Southeast flow aloft will bring the possibility of isolated afternoon thunderstorms to the Sierra Crest Sunday. Another weak Pacific trough will move over the West Coast causing temperatures to cool back down to near or a little below normal across the entire region Monday through Wednesday. Westerly winds of 20 to 30 mph with gusts to 50 mph will surface across the wind prone mountain and desert areas once again Monday afternoon through Wednesday evening. Minimum humidity will be mainly in the single digits and teens above and inland from the marine layer through the middle of next week.
